

Graphing Skills

WHY DO GRAPHS?

**SOMETIMES IT'S EASY
TO SEE PATTERNS IN
EXPERIMENTAL DATA**

Time (s)	Height (m)
1	2
2	4
3	6
4	8
5	10

**SOMETIMES IT IS NOT
SO EASY**

Time (min)	Temperature (°C)
2	9.45
4	21.21
6	29.98
8	40.01
10	49.69

GRAPHS HELP SHOW PATTERNS

**HARD TO SEE THE
PATTERN AT FIRST**

**EASIER TO SEE THE
PATTERN IN GRAPH FORM**

Time (min)	Temperature (°C)
2	9.45
4	21.21
6	29.98
8	40.01
10	49.69

WHICH GRAPH TO USE?

Bar Graph

USED TO SHOW
HOW DIFFERENT
CATEGORIES OF
THINGS COMPARE.

*e.g. Number of
students that like
different colors*

Line Graph

USED TO SHOW HOW
ONE VARIABLE
CHANGES IN
RESPONSE TO
ANOTHER VARIABLE,
USUALLY TIME

*e.g. Temperature of
room every hour*

WHICH GRAPH TO USE?

Bar Graph

Line Graph

1. Eye Color in the M2 Class

Eye Color	Number of Students
Blue	5
Green	3
Hazel	2
Brown	15

Bar Graph

WHICH GRAPH TO USE?

Bar Graph

Line Graph

2. Average Temperature In New York City Last Year

Month	Temperature (°C)
January	0
February	2
March	5
April	11
May	17
June	22

Month	Temperature (°C)
July	24
August	24
September	20
October	14
November	8
December	2

Line Graph

WHICH GRAPH TO USE?

Bar Graph

Line Graph

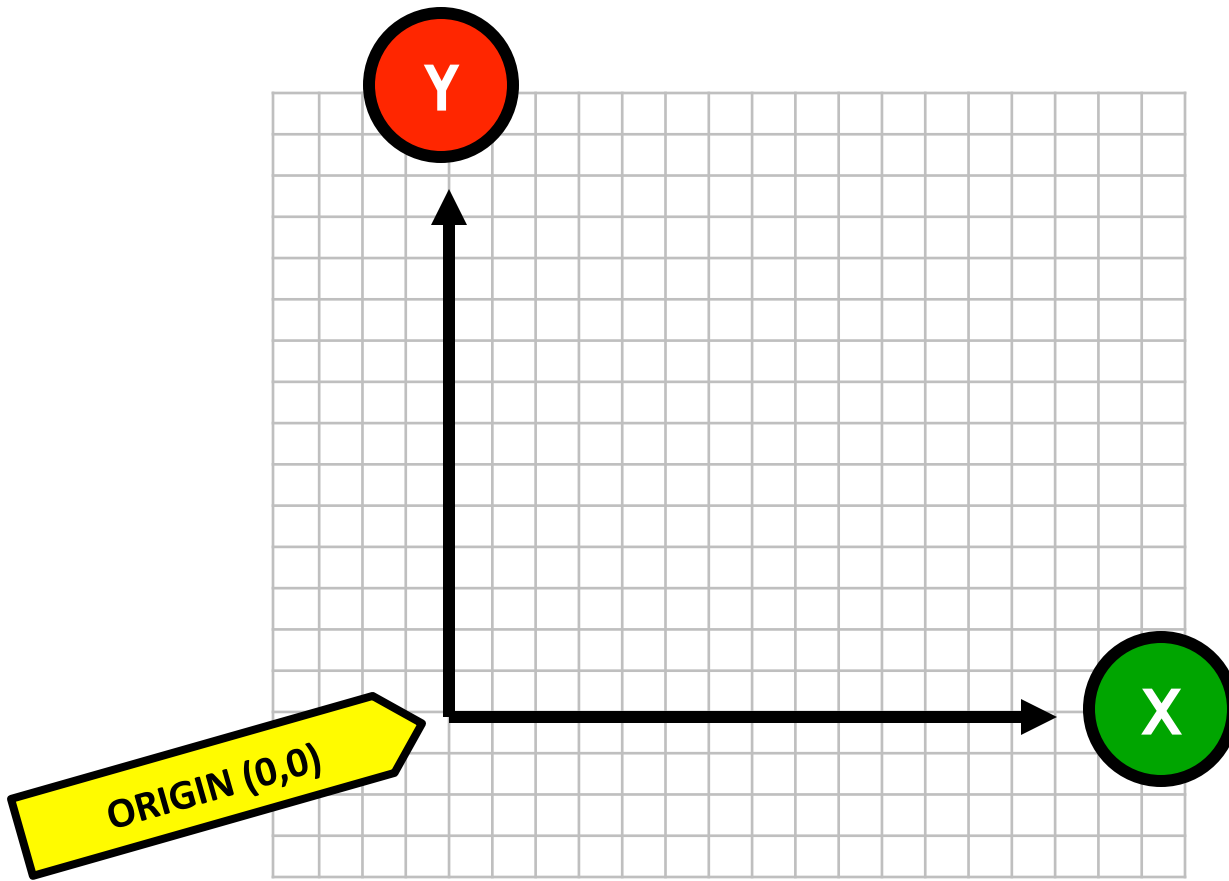

3. Plant Growth With and Without Fertilizer

Date	Plant Height (cm)	Plant Height (cm)
	Without Fertilizer	With Fertilizer
Week 1	0	0
Week 2	0	3
Week 3	3	7
Week 4	4	9
Week 5	6	17
Week 6	7	24

Line Graph (Double)

7 PARTS OF A GOOD GRAPH

1. TYPE OF GRAPH (BAR OR LINE)
2. TITLE (DETAILED; HAS BOTH VARIABLES)
3. X-AXIS SCALE (PROPERLY SPACED)
4. X-AXIS LABEL (WITH UNITS)
5. Y-AXIS SCALE (PROPERLY SPACED)
6. Y-AXIS LABEL (WITH UNITS)
7. ACCURACY AND NEATNESS

AXES

- X AXIS RUNS HORIZONTALLY
- Y AXIS RUNS VERTICALLY

Number of Baskets Made vs. Distance From Hoop

TITLE

- MUST CONTAIN BOTH VARIABLES
- GOOD TECHNIQUE: DV vs. IV

Number of Baskets Made vs. Distance From Hoop

DEPENDENT VARIABLE

INDEPENDENT VARIABLE

LABELS

- X AXIS → INDEPENDENT VARIABLE
- Y AXIS → DEPENDENT VARIABLE

3

Number of Baskets Made vs. Distance From Hoop

SCALES

- SHOULD COVER AT LEAST $\frac{1}{2}$ THE GRID
- SHOULD COVER ALL VALUES

DRAWING SCALES

THIS CAN BE TRICKY AND REALLY DEPENDS ON THE DATA YOU ARE WORKING WITH.

HERE ARE 3 POINTS TO HELP YOU:

**MAKE SURE THE
GRAPH FILLS UP
AT LEAST HALF
OF THE GRID
SPACE**

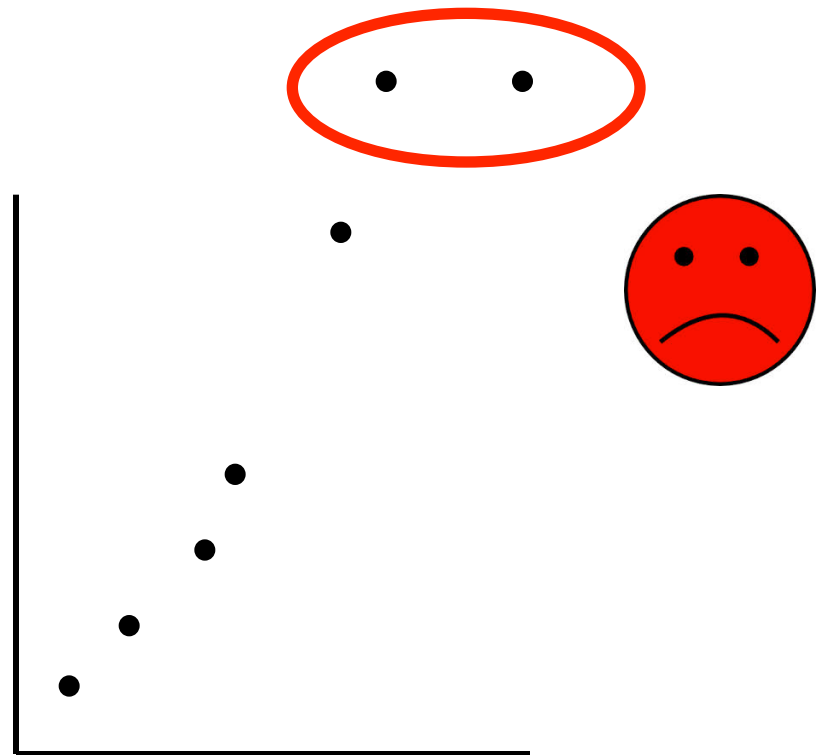

DRAWING SCALES

THIS CAN BE TRICKY AND REALLY DEPENDS ON THE DATA YOU ARE WORKING WITH.

HERE ARE 3 POINTS TO HELP YOU:

**MAKE SURE
THAT ALL OF
YOUR POINTS
CAN FIT ON THE
SCALE.**

DRAWING SCALES

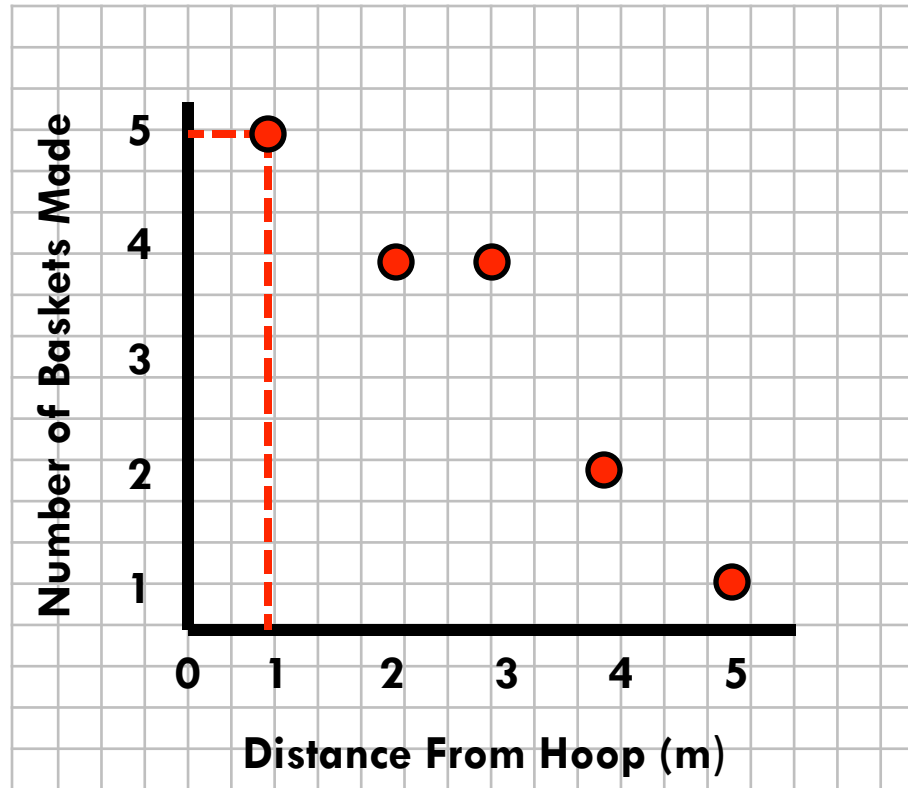

THIS CAN BE TRICKY AND REALLY DEPENDS ON THE DATA YOU ARE WORKING WITH.

HERE ARE 3 POINTS TO HELP YOU:

**MAKE SURE THE
SCALE GOES UP
IN NICE EASY
NUMBERS
(2s, 10s, etc.)**

Number of Baskets Made vs. Distance From Hoop

DATA TABLE	
Distance From Hoop (m)	Number Baskets Made
1	5
2	4
3	4
4	2
5	1

PLOT THE DATA

- PLOT EACH BIT OF DATA
- PLOT ACCURATELY!

Number of Baskets Made vs. Distance From Hoop

LINE OF BEST FIT

- A SMOOTH LINE SHOWING THE GENERAL PATTERN OF THE GRAPH.
- MAY NOT GO THROUGH ALL THE POINTS

LINES OF BEST FIT

ONE OF THE MOST COMMON MISTAKES IS
CONNECTING THE POINTS ONE BY ONE.

A LINE OF BEST FIT IS A SMOOTH LINE!

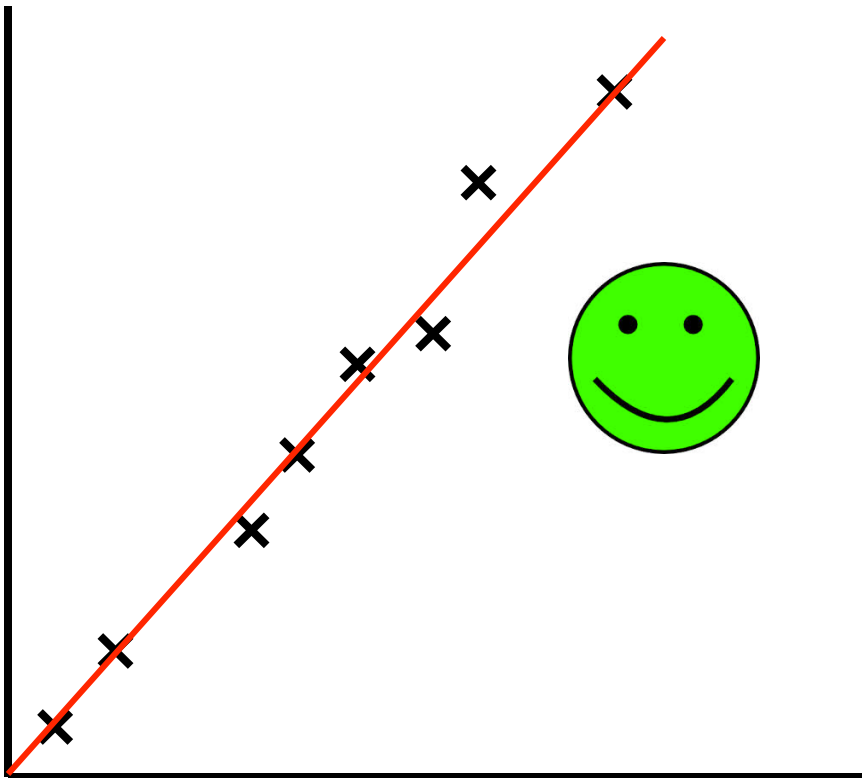

**THIS IS AN UNEVEN
LINE AND DOESN'T
REALLY SHOW THE
PATTERN.**

LINES OF BEST FIT

ONE OF THE MOST COMMON MISTAKES IS
CONNECTING THE POINTS ONE BY ONE.

A LINE OF BEST FIT IS A SMOOTH LINE!

**THIS GIVES A MUCH
CLEARER LOOK AT
THE PATTERN.**

LINES OF BEST FIT

WHEN DRAWING A LINE OF BEST FIT,
IT'S IMPORTANT TO GET AS MANY POINTS
ABOVE THE LINE AS BELOW.

TOO LOW

TOO HIGH

JUST RIGHT!

LINES OF BEST FIT

NOT ALL LINES OF BEST FIT HAVE TO GO THROUGH THE ORIGIN (0,0).

OK FIT

BEST FIT!

Interpreting Graphs

Interpreting Graphs

In some ways, graphs tell a story.

Graphs are used to show how two variables are linked together.

When you start to interpret graphs, you should ask yourself this question:

“When the X variable changes, what happens to the Y variable, and why?”

Interpreting Graphs

HOW ARE VARIABLES (A) AND (B) RELATED?

AS (A)
INCREASES,
(B) DECREASES

Interpreting Graphs

HOW ARE VARIABLES (A) AND (B) RELATED?

AS (A)
INCREASES,
(B) INCREASES
TOO

Interpreting Graphs

HOW ARE VARIABLES (A) AND (B) RELATED?

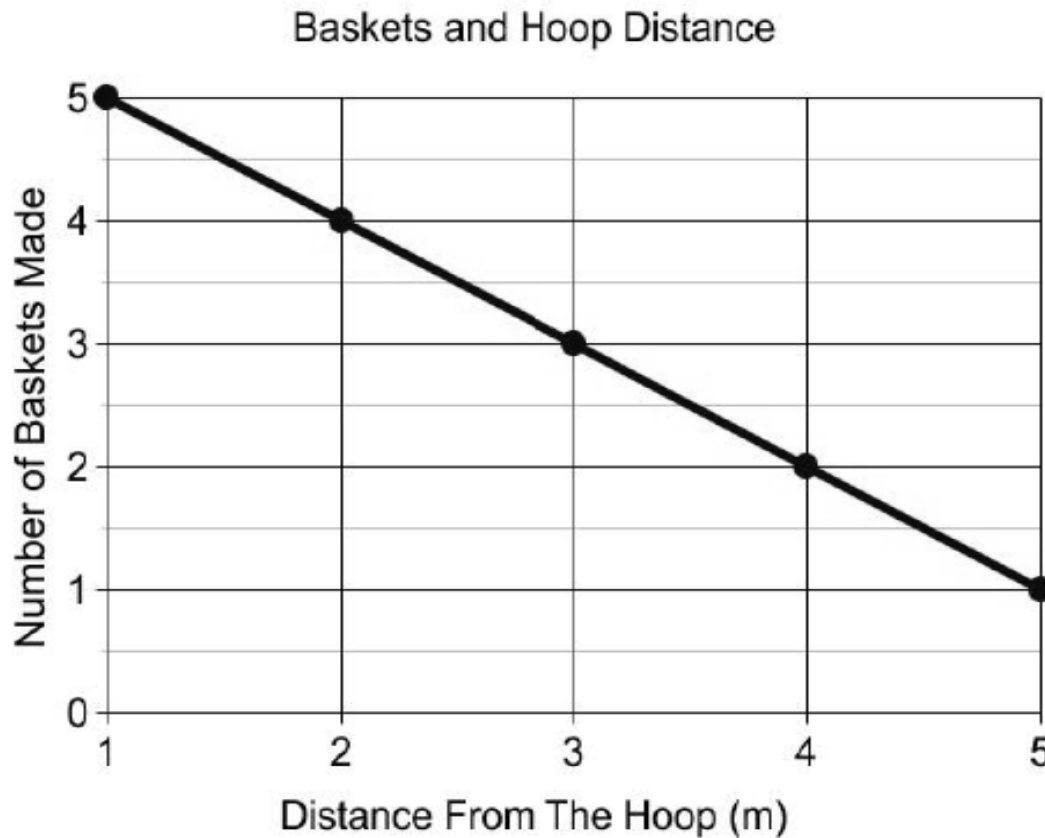

AS (A)
INCREASES,
(B) INCREASES
UP TO POINT X

AFTER POINT X,
AS (A)
INCREASES,
(B) DOES NOT
CHANGE

Interpreting Graphs

What does the graph show?

**AS THE DISTANCE
FROM THE HOOP
INCREASES, THE
NUMBER OF
BASKETS MADE
DECREASES**

Interpreting Graphs

What does the graph show?

Cell Phone Usage and Car Accidents

**AS CELL PHONE
USE INCREASES,
THE NUMBER OF
CAR ACCIDENTS
INCREASES**

Interpreting Graphs

What does the graph show?

Number of Chocolates Consumed vs. Happy Feelings

AS THE # OF CHOCOLATES CONSUMED INCREASES, HAPPY FEELINGS ALSO INCREASE BUT ONLY UP TO 8, AFTERWARDS HAPPY FEELINGS PLATEAU AND THEN RAPIDLY DECREASE

Any Questions?
